Applied Motion's advanced design features provide the highest level of system performance and trouble-free installation and operation:

Well Organized Power Distribution Design

480V 3-phase is distributed from the top down, keeping remainder of cabinet free from high voltage potentials – fused disconnects allow logical isolation of drive modules.

EMI Shielding Used Throughout

Purpose-designed and manufactured zinc-plated shields provide electromagnetic shielding between PWM noise sources and sensitive logic level signals.

Independent Wiring Closet

This design feature provides segregated termination points for all field connections. Simplifies installation and eliminates arc flash hazard in most installations.

Elegant Design

Cabinets are well labeled and equipped with ample lighting and component spacing to facilitate ease of troubleshooting and service.
